Irving Resources Inc. (Irving) is a Canadian-based mineral exploration company with a focus on gold in Japan. Irving also holds, through a subsidiary, a Project Venture Agreement with Japan Oil, Gas and Metals National Corporation (JOGMEC). Irving resulted from completion of a plan of arrangement involving Irving, Gold Canyon Resources Inc. and First Mining Finance Corp. and commenced trading on the CSE under the symbol IRV in December, 2015. In 2016, Irving's wholly-owned subsidiary, Irving Resources Japan GK, (IRV Japan) was established.

Japan

In Japan, Irving is focused on identifying high-silica, high-grade epithermal Au-Ag veins that could potentially be suitable for use as smelter flux in the many operating base metal smelters throughout the country. Recovery of precious metals occurs during the smelting and refining process.

Management

Akiko Levinson, Director and President

Dr. Quinton Hennigh, Director and Technical Advisor

Douglas Buchanan, Q.C., Director

Kevin Box, Director

Haruo Harada, Director and President of Irving Japan

Lisa Sharp, CPA, CGA, Chief Financial Officer

Hidetoshi Takaoka, Technical Advisor and Chief Mining Engineer, Irving Japan

Toshiyuki Goto, General Manager, Omu Office and Omui Mine Site, Irving Japan

Dr. Takeshi Uemoto, Omu Project Manager, Irving Japan

Corporate Head Office

Japan continued

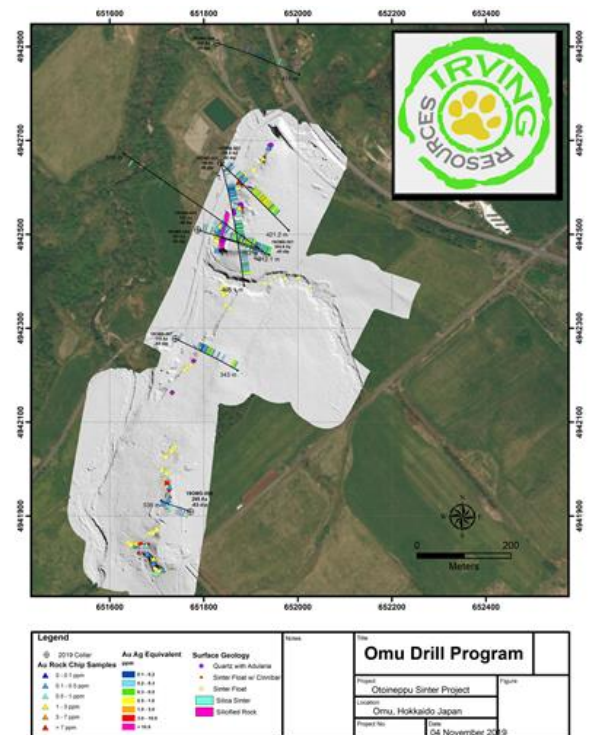

In 2016, IRV Japan secured the 2.98 sq km Omui mining license on the island of Hokkaido, Japan. To augment its land position, IRV Japan has secured 2.18 sq km of surface rights and filed 56 prospecting licenses covering an additional 171.38 sq km of prospective ground encompassing the entirety of the Omu volcanic graben.

Irving's 2017 exploration program at Omu, carried out by Mitsui Mineral Development Engineering Co., Ltd. (MINDECO), included stream sediment analyses by Bulk Leach Extractable Gold (BLEG) method, a detailed soil grid, a detailed gravity survey and drone-based magnetics. Results proved highly encouraging and helped target advanced exploration including trenching, drilling and bulk sampling.

In late 2018, IRV Japan received approval of its Mine Plan at Omui as well as approval of its Otoineppu Prospecting Plan covering diamond drilling and advanced exploration at the Omu Sinter.

From March to August 2019, the company drilled 8 diamond holes at Omu Sinter. Of those initial eight holes that tested 2 km long N-S trending target, seven encountered high-grade vein mineralization.

Irving conducted extensive geophysical surveys including controlled-source audio magnetotellurics ("CSAMT"), gravity and magnetics, and the company has identified several high-priority targets within a one km radius of Honpi. In December 2019, 10 diamond drill holes at Omui Mine site have been completed. The drill was relocated to Omu Sinter from January to April 2020. Starting April 2020, Irving has been undertaking additional drilling at Omui Mine site.

Cautionary Statement and Forward Looking Statement Disclaimer: Certain information included in this discussion may constitute forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. Such statements are based on a number of assumptions which may prove to be incorrect. Investors should not place undue reliance on forward-looking statements as the plans, intentions or expectations upon which they are based might not occur. The Company cautions that the foregoing list of important factors is not exhaustive. Investors and others who base themselves on the Company's forward-looking statements should carefully consider the above factors as well as the ability of obtaining sufficient financial support.
